

News Update ODS2 FMS September 2009

Exclusively for users of ODS2 Field Marketing Software

The News Update for September 2009 contains the following:

1. A new website
2. A new environment
3. Software updates

1. A New Website

As we announced in last month's News Update we have launched our new website!

The growth and development that ODS2 has gone through during the last year have resulted in our updating our website, to show more fully who we are, what we are doing and that we are very proud of the results.

You are invited to check out the new website at: www.ods2.com and see for yourself.

The integrated movies are especially worth viewing. We now have a corporate movie and a FMS product movie, with more movies to come.

The corporate movie gives you general insight into who we are and what we stand for and you can find it on the front page of our website.

The FMS product movie shows all the main elements in the FMS software, giving you an overview of the possibilities of the software. The FMS movie can be found at this link:

http://www.ods2.com/oplossingen/field_marketing_software/beschrijving

If you would like to show these videos to your clients or colleagues, please feel free to contact us for a downloadable copy/ DVD that contains both movies. Send you requests via e-mail to: Gerwin@ods2.com.

2. A new environment

With the new website comes a new environment for the FMS software. We are currently working on a change in the location of the software. From October 1st onwards the software will be found at: fms.ods2.com. We will be supporting www.ods3.com for a few months, after which time this site will no longer be supporting the FMS software. We will be sending out a detailed plan, meanwhile make sure that your organization and your clients start to update their bookmark for the software to: fms.ods2.com.

3. Software Updates

This month we have two updates within the FMS software:

- The new 'Photos > 3 months report'.
- An upgrade in the handling of form logic in the questionnaire.

3.1 Photos > 3 months

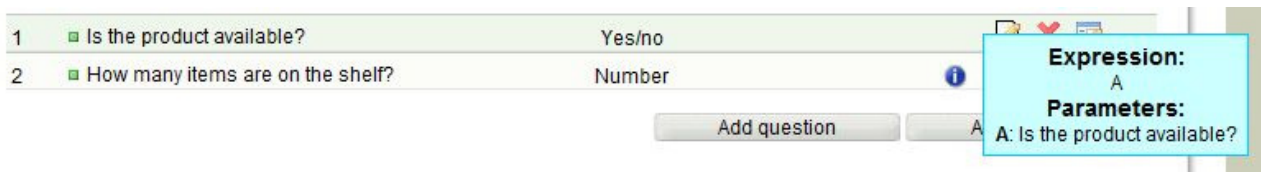

In the administrator menu we have added a report that will show you all the photos of each of your projects that are older than three months that have been stored in our database. The report will sort and display this information for each project. This report will provide you with the ability to identify older photos and make a decision as to either continue to store or to delete the older and unused data.

When a decision is made that old photos are to be removed, the administrator can delete these from a specific project by selecting them from the photo report menu "remove photos".

3.2 Form logic

To upgrade the usability of the form logic in a questionnaire, we created an option to show the logic that has been set for a certain question. With this upgrade it is now easier to see the form logic that has been assigned to a specific question. When you hover over a question the form logic for the question will appear in a blue info box and when it does, it will show the chosen expression and related parameters. Provided below is a screen shot of this event.

This new feature will allow you to work even more efficiently when you are creating or updating a questionnaire.

Next month we will be back with more news from ODS2!
